

02 — Product Requirements Document (PRD)

Project	11 Estates CRM (estateCRM)
Version	0.5.1
Date	2026-09-24
Based on	docs/01-brd.md v0.6 (approved 2026-09-24 via CR-003); worked scenarios from docs/inputs/vinit-journeys-artifact.md
Status	APPROVED 2026-09-24, amended by CR-005 (frozen; changes via Change Request). Appendix C to be confirmed against the extractor columns (OQ-P11) through a CR

Change log

Version	Change
0.1–0.3	Drafts against BRD v0.3 (broker roles, single Listing model, chat-first UI).
0.4	Rewritten for BRD v0.5 (CR-002): demand and supply teams, Property/Project/Offer/Demand/Person model, status axes, life curve, publication levels, call queues, journeys to Closed, many-to-many matching with bundles, manual entry, three dashboards. Chat-first kept, with a "My queue" panel added. Vinit's scenarios added as acceptance scenarios (Appendix B).
0.5	Updated for BRD v0.6 (CR-003): the standard deal vocabulary (record_scope → deal_type → market → segment → property_type → side), Land segment, deal tags, generated labels, party_type; non-property desks (Business, Capital, Archive, Network, Watchlist); two intake modes with row-level validation; review queue by review_reason; classification dashboards and side checks; read-only vocabulary; field dictionary (Appendix C).
0.5.1	CR-005 (2026-09-24): new §8.4, the Phase 1a pilot on free plans with temporary NFR relaxations and a paid-plan gate.

Decisions for this PRD

#	Decision	Source
D-1	Both teams see all data. Queues are personal, but no offer or demand is hidden from 11 Estates staff. Viewing contact details is audit-logged.	OQ-10, 2026-09-24
D-2	Matching runs across all data. Each match is visible to everyone and owned by the demand's owner.	follows D-1
D-3	Chat, exports and dashboards follow the same visibility (everything within the organisation).	2026-09-23
D-4	Publishing within the ceiling: the supply team sets the publication level (Private / Anonymous / Public) within the BRD §4.6 ceiling. There is no manager approval step. An automatic privacy scan is a blocking check before Anonymous or Public.	CR-002 X-3
D-5	Photos come from calls and visits, from the source (WhatsApp shares), and from image links in uploaded sheets. They attach to the Property, and an Offer can choose which ones to use.	BRD OQ-15
D-6	Website shows locality only. Building names appear only in proposals to qualified clients.	BRD A-11, CR-001 withdrawn

#	Decision	Source
D-7	Staff sign in with Google. Only invited accounts can sign in.	2026-09-23
D-8	No personal data is sent to third-party AI providers.	2026-09-23 (answers part of BRD OQ-9)
D-9	Chat-first UI with interactive cards and a side panel. A My queue panel is the daily work list. The assistant proposes changes and a person confirms them.	2026-09-24, CR-002 X-4
D-10	Daily call capacity is set per person by a Manager (default 40). The day's list fills with Must call first and tops up from Should call.	OQ-20
D-11	Proposals are shared as a PDF and/or a private share link (expiring). Staff send them through their own WhatsApp or email. The system sends nothing.	OQ-22
D-12	Life curve for the open categories (BRD OQ-19). Industrial (any deal): Fresh ≤ 45 , Ageing ≤ 90 , Stale ≤ 120 . Land and JV: 60 / 120 / 180. Pagdi: same as Sale, Secondary (supply 45 / 90 / 120, demand 45 / 90 / 150). Expired after the last value. All editable by Admin.	OQ-19, CR-003 Y-2
D-13	Phase 1 intake is file upload + manual entry only. WhatsApp (n8n) and Meta webhooks shown in Vinit's artifact are next phase.	CR-002 X-7
D-14	Desks. Everyone can view the Business Desk, Capital Desk, Archive, Network and Watchlist. Managers own the Business and Capital desks (review, assign, archive). Watchlist follow-up tasks go to the supply team. A Business record with includes_property = Yes also creates a Property that enters Should call.	OQ-10, CR-003 Y-3
D-15	Two intake modes. Files whose header matches the standard schema use strict mode : out-of-list values are rejected row by row, and needs_review rows are loaded into the review queue. Other files use mapping mode : columns are mapped, legacy terms are translated with the BRD §4.2 "absorbs" table, and anything that can't be translated is set to needs_review.	CR-003 Y-5
D-16	The vocabulary is read-only in the app. Controlled lists are versioned reference data. Changes come through a request owned by Vinit and Priyanka and ship to the CRM and both extractors together.	BRD §4.2, CR-003 Y-7
D-17	Hotels and resorts are Commercial property types; 1 RK is stored as property_type Studio with bhk 0.5; Pagdi is kept as a deal type.	BRD OQ-25/26/27, CR-003 Y-4

1. Purpose and scope

This PRD turns BRD v0.6 into product behaviour: roles, records, journeys, screens (chat cards and panels), user stories with acceptance criteria, functional and non-functional requirements. Scope is exactly BRD §11. The BRD is the source of truth for business rules. This document cites BRD sections instead of repeating them where possible.

2. Roles and permissions

2.1 Roles

Role	Who	Summary
Admin	Owner / IT	Everything, plus users, settings, reference data, API keys, audit log
Manager	Runs the business or a team	Everything a team member can do, plus reassigning work, setting call capacity, undoing merges, overriding exits, dashboards for all
Demand agent	Demand team (e.g. Priyanka)	Works demand: quick add, understand, qualify, match, sourcing requests, proposals, site visits, In process, exits
Supply agent	Supply team (e.g. Vinit)	Works offers: call queues, contact, verify, qualify, publication levels, Add supply, projects and price sheets
Data operator	Staff who upload (may sit in either team)	Uploads files, maps templates, works review queues
Website client	System (11 Estates website, project microsites)	Read-only Listings API, published items only

A user has one role. A Data operator permission can be added to an agent (A-15).

2.2 Visibility (D-1)

- **R-VIS-1** Every record belongs to one organisation (tenant). There is never cross-tenant access (BRD G7).
- **R-VIS-2** All staff see all Properties, Projects, Offers, Demands, People, Matches and Deals in their organisation.
- **R-VIS-3** Personal details (names, phones, emails, unit-level address) are shown to staff, but each view of a contact is audit-logged. Exports that include contact columns are audit-logged with row counts.
- **R-VIS-4** The Website client sees only published offers, projects and anonymous demand posts, at their publication level, and only the public fields (§8.3).

2.3 Permission matrix

Capability	Admin	Manager	Demand agent	Supply agent	Data operator
View all records	✓	✓	✓	✓	✓
Upload files, map templates	✓	✓	✓	✓	✓
Review queues (unclassified, uncertain merges, price gaps)	✓	✓	—	—	✓
Undo a merge	✓	✓	—	—	—

Change the controlled vocabulary	— (by versioned release only, D-16)	—	—	—	—

3. Information model (business view)

Records and vocabulary follow BRD v0.6 §4.1–4.2 exactly. **Field names are the BRD's snake_case names**, and the full list is in Appendix C. This section lists what the UI and requirements use.

3.1 Classification (every record)

record_scope, side (Supply / Demand / None), side_evidence, needs_review, review_reason, source type, capture mode, tenant. Property-scope records add deal_type, market (Sale only), segment and property_type. Labels ("For Rent", "Wants to Buy, New Project") are **generated from these fields, never stored** (BRD §4.2 display labels). Filters and reports always use the stored fields.

3.2 Property (PRP)

segment (Residential / Commercial / Industrial / Land), property_type (controlled per segment; several pipe-separated), property_detail (descriptive words such as Luxury or Duplex), land_use (Land only), locality, city, state, micromarket (derived), **building/society (private: proposals only)**, landmark, wing/unit/floor (private), total floors, built_up_area_sqft, carpet_area_sqft, bhk (residential), amenities, photos (origin: call, visit,

source share, sheet link), sources (second sources with price and a price-gap flag), sightings, people (with party_type).

3.3 Project (PRJ)

Sale, Primary only. Developer (Person, party_type Developer), name, locality/micromarket, **project RERA number (required before publishing)**, possession, amenities, floor plans, dated price sheets (the latest drives the life curve), unit configurations as Offers (property_type + bhk_min/bhk_max + unit count).

3.4 Offer (INV)

Exactly **one deal_type** per Offer (Sale, Lease, JV or Pagdi). A Sale|Lease supply record is one Property with two Offers.

- market (Sale: Primary / Secondary).
- Prices: sale_price_inr_min/max, rent_monthly_inr_min/max, current_rent_inr (tenanted), deposit_inr.
- **Deal tags:** sale_mode, deadline_date, tenancy_status, tenure, agreement_form, is_jodi, possession_status, **possession_date** (the Available from date), furnishing, price_negotiable.
- Revenue share with a partner broker (text + %). Unit count (projects).
- **Status axes** (BRD §4.4):
 - Record: Captured → Enriched → Contacted → Verified → Qualified.
 - Publication: Private / Anonymous / Public.
 - Commercial: Upcoming, Available, Matched, In proposal, Site visit, In process, Closed, Inactive.
 - Signals: enquiries, matches and sightings counters.
- **Life curve:** last confirmed (date + how), last seen, day count, stage. Category keys follow BRD §4.5 plus D-12.
- Queue state: Must call / Should call rank, attempts, next call. Tags: "Sourced for DEM-...", lease-renewal Upcoming.

3.5 Demand (DEM)

side = Demand. deal_type (one or more), market (Primary / Secondary / Any, Sale only), segment, property_type (one or more), micromarkets/localities (multi), budget_inr_min/max or rent_monthly_inr_min/max, area_sqft_min/max (built up or carpet stated), bhk_min/max, move-in timing, **deal tags the client states** (e.g. tenancy_status = Tenanted for a preleased buyer, sale_mode = Auction), client and decision maker, introducing broker + shared-commission note, touches with first-touch flag.

- **Status axes:**
 - Record: Captured → Enriched → Verified → Qualified.
 - Publication: Private / Anonymous (demand post, "Wants" label).
 - Commercial: New, Contacted, Active, Sourcing, Matched, Proposal shared, Site visit, In process, Closed.
 - Exit: Lost / Dormant / Invalid, with reason, competing terms and revisit date.
- Life curve as for offers. Owner: a demand agent.

3.6 Non-property records (stored and viewable, no journeys; D-14)

Record	Key fields	Lives in
Business (BIZ)	deal_type (Sale, Lease, Partnership, Distribution), side, sector, includes_property, business_description; linked Property when includes_property = Yes	Business Desk
Capital (CAP)	deal_type (Equity, Debt, Project Funding, Asset Sale), side, sector, business_description	Capital Desk
Equipment (EQP)	deal_type (Sale, Lease), side, business_description	Archive
Market Participant	A Person with participant_role (Broker, Developer, Auctioneer, Architect, PMC, Consultant, Lender)	Network (People directory)
Watchlist item (WCH)	signal_type (Redevelopment Upcoming, Government Tender, Land Policy, Title Notice), party_type, deadline_date, follow-up task (supply team)	Watchlist

3.7 Other records

Record	Key fields
Person	Name, phones (normalised), emails, company, party_type (Owner, Broker, Developer, Company, Bank, Society, Government), participant_role (if a Market Participant), flags (Invalid, broker-posing-as-client, unwilling, anonymous-shares-only), dependencies ("selling INV-x to buy DEM-y"). Party roles in labels: Seller/Buyer, Developer/Buyer, Landlord/Tenant, Landowner or Society/Developer, Outgoing/Incoming tenant.
Enquiry (ENQ)	Source export, campaign / form / listing / project ID, name, phone, message, date, linked Offer/Project, resulting Demand or touch
Touch	Demand, source type, capture mode, source detail, date, first-touch flag
Match (MAT)	Demand, one Offer or a bundle of Offers, score + factor breakdown, status (Suggested / Confirmed / Rejected / Closed with reason), flags (reconfirm, price above budget), exclusion reason (e.g. "Available too late")
Sourcing request (SRQ)	Demand, requested by, assigned supply agent, due date, priority, status, offers added
Proposal (PROP)	Demand, options, format (PDF / link), link expiry, sent on, client feedback per option
Site visit	Demand, offer(s), date/time, attendees, outcome, preferred option
Deal (DEAL)	Demand, offer, agreed terms, stage (Negotiation / Documentation / Stamp duty & registration / Closed / Cancelled), next action + follow-up date (required) , cancellation reason
Raw record / sighting	Upload, row number, original values, linked record
Market data point	Property/locality, price, date, source (closed by us, closed elsewhere, reported), notes
Upload	File, intake mode (strict / mapping), source type, uploader, template, counts, row errors, status

3.8 Reference data

- **Controlled vocabulary** (BRD §4.2): versioned, read-only in the app (D-16). Includes the legacy-term translation table used by mapping mode.
 - Mumbai (MMR) **micromarket hierarchy**: zone → micromarket → locality → sub-locality, with aliases (e.g. Andheri East contains Chakala, Marol, MIDC).
 - Life-curve thresholds per category (BRD §4.5 + D-12), editable by Admin.
-

4. Journeys (behaviour)

Business rules are in BRD §4.4–§7. This section defines how the product carries them out.

4.1 Life curve engine

- Runs on every confirmation event (call outcome "confirmed", site visit, price sheet) and daily at 02:00 IST.
- A confirmation resets the day count to 0. A sighting updates last seen only.
- On a stage change it applies the automatic actions in BRD §4.5:
 - Ageing: adds a reconfirm to Should call, or to the demand queue for a demand.
 - Stale: downgrades Public to Anonymous and stops new match suggestions for the demand.
 - Expired: unpublishes the offer and excludes it from matching, or moves the demand to Dormant.
- Upcoming offers start counting 60 days before Available from. Projects count from the latest price sheet. Dormant demand is paused until its revisit date.

4.2 Supply call queues (BRD §5.2)

- **Must call**: offers with an enquiry or a new confirmed or suggested match. Due within 24 h of the enquiry upload.
- **Should call**: new captures (proactive vetting) and reconfirmations. Ranked by freshness, demand gap (open demand in the category and micromarket minus matching supply), source quality and price band. Weights are tunables.
- **Today's list per person** = Must call (all, oldest due first) + Should call up to their daily capacity (D-10).
- **Call outcome** is required after each call:
 - Confirmed: resets the life curve and allows edits to price, availability and areas.
 - No answer: counts an attempt. After 3 attempts the person is marked unreachable (A-37).
 - Already gone: the offer becomes Inactive and the price goes to market data if known.
 - Unwilling: kept for intelligence and never published.

4.3 Demand queues (BRD §8)

To contact, To qualify, Reconfirm due, In sourcing, Sourcing requests open, Open matches (to confirm), Proposals out (awaiting feedback), Site visits this week, In process with follow-up due (overdue at the top), Dormant revisits due today.

4.4 Handoffs (BRD §6.2)

- Sourcing request (demand → supply) with due date and priority. It appears in the assignee's queue.
- Match notification to the demand owner.
- Proposal, visit and In process status shown on the offer for the supply owner.
- When an offer closes, all other matched demands are notified and their matches close with the reason "Leased/Sold to another client". When a demand exits, the matched offers' owners are notified and their matches are released.

4.5 Matching engine (BRD §7)

- **Hard filters:**
 - opposite side, same record_scope (Property);
 - offer deal_type ∈ the demand's deal_types;
 - market: the demand's Any matches Primary and Secondary;
 - same segment, and offer property_type ∈ the demand's property_types;
 - deal tags the client stated must match (e.g. tenancy_status = Tenanted, sale_mode);
 - micromarket overlap (the hierarchy counts, e.g. Chakala is inside Andheri East);
 - possession_date within the demand's window, otherwise excluded with the reason;
 - offer not Expired, Closed or Inactive; demand not Stale and not exited.
- **Scored:** micromarket proximity, price vs budget (the right price field for the deal_type), area like with like (built up vs built up, carpet vs carpet), bhk range, timing, furnishing and must-haves. The weights are tunables, initially set from the PRD v0.3 factors and tuned from feedback (M6).
- **Bundles:** for commercial and industrial demand, the engine suggests combinations of 2–3 offers in the same building or micromarket whose combined area meets the requirement and whose combined price is within budget (A-38).
- It re-runs on: a new or changed offer or demand, a price change (flags "price above budget"), a close or exit, and a life-curve change.
- Matches are suggestions. People confirm them. Nobody is contacted automatically.

4.6 Publication (BRD §4.6, D-4)

- The **ceiling is computed:**
 - Private: always allowed.
 - Anonymous: allowed while Fresh or Ageing.
 - Public: needs Verified, real photos, and Fresh or Ageing.
 - Closed, Inactive and Expired offers are forced to Private.
- The supply agent picks a level at or below the ceiling. The system automatically lowers the level when the ceiling drops (Stale → Anonymous, Expired → Private).
- **Blocking privacy scan** before Anonymous or Public: phones, emails, URLs, building/society names, wing/unit numbers in the title and description; text detected on photos is a warning. The public description is auto-generated from fields and sanitised, and staff can edit it.
- **Labels:** listings show generated labels (e.g. "For Rent", "New Project, For Sale"), never stored values or legacy terms.
- **RERA:** the 11 Estates MahaRERA agent number is on every listing (from settings). Sale, Primary listings require the project RERA number.

- **Anonymous demand posts** (during sourcing) show the "Wants" label, segment, property_type, micromarket, area range, budget band and timing. They are taken down when the demand is matched or exits.

5. User interface (chat-first + My queue)

5.1 Principles (unchanged from v0.3, extended)

- **The chat is home.** Every function is reachable by typing, by "/" quick actions or by sidebar shortcuts. Results come back as interactive cards. Larger views open in the side panel (D-9).
- **R-CHAT-1:** nothing changes until a person clicks a button on a card, and permissions are re-checked on the click.
- **R-CHAT-2:** every data answer is grounded in a real query and shows "How I got this".
- **R-CHAT-3:** cards show live state.
- **R-UI-4 (new): My queue is always one click away.** Queue work is list-driven, so **My queue** is a first-class panel:
 - pinned in the sidebar with counts;
 - opened by "/"queue" or the home tile;
 - each item opens its record with the right action card (log call outcome, qualify, confirm match, follow up).
- Desktop-first. Tablet and phone usable, with the side panel full-screen on phones.

5.2 Layout

5.3 Home

- A greeting plus **Today** tiles for the signed-in role:
 - Demand agent: To contact, Reconfirm due, Open matches, Follow-ups overdue.
 - Supply agent: Must call, Should call (today), Sourcing requests, Stale Public offers.
 - Manager: team queues and life-curve health.
- The composer and suggestions sit below the tiles.

5.4 Card and panel catalogue

ID	Card / panel	Appears when	Main actions	Roles
C-01	Today tiles	Home	Click → opens the queue section	all
C-02	Answer + How I got this	Any question	Expand	all

ID	Card / panel	Appears when	Main actions	Roles
C-03	Table card	Data questions	Excel, Open in panel, row → record panel	all
C-04	Attach / Mapping / Progress → Report	Upload	Start processing, review follow-ups	all
C-05	Review cards, grouped by review_reason (e.g. side unclear, scope unclear, value not in list, uncertain merge, price gap)	"/review"	Set the field from controlled dropdowns; Merge / Different / Skip; accept price. Review never blocks routing (BRD §4.7)	Admin, Mgr, Op
C-06	Quick add	"/add demand", "/add supply", or "new requirement from ..."	Phone first → dedup result → side (asked first for usability) → deal_type → market (only for Sale) → segment → property_type (filtered by segment) → bhk, area, budget, locality, optional deal tags. Controlled dropdowns only; prefilled from the typed text → Create	Demand, Supply, Mgr
C-07	Add supply	From a demand or SRQ, or "/add supply"	Prefilled from the demand; property-level dedup first → Create offer (tagged Sourced for DEM, matched on creation)	Supply, Demand (own demand), Mgr
C-08	Call outcome	Opening a queue item or "called Sanjay about INV-00452"	Confirmed (edit price/availability/areas) / No answer / Already gone / Unwilling; add an offer on the same property; next call date	Supply, Demand, Mgr
C-09	Qualify demand	After the first call	Checklist: decision maker, budget confirmed, timing confirmed, agrees to work with 11 Estates → Mark qualified → inventory check runs	Demand, Mgr
C-10	Matches (incl. bundles)	"/matches", after qualify, new offer	Confirm / Reject (with reason) / Build bundle; reconfirm and price flags shown	Demand, Mgr (Supply views)
C-11	Sourcing request	No match at inventory check, or "source supply for DEM-..."	Create SRQ (assignee, due, priority), toggle anonymous demand post → Confirm	Demand, Mgr
C-12	Publication	On an offer, or "publish INV-..."	Shows the ceiling and why, privacy scan, RERA check; choose Private / Anonymous / Public	Supply, Mgr
C-13	Proposal	"send proposal for DEM-..."	Pick options → preview → Generate PDF / share link → mark sent (logged)	Demand, Mgr
C-14	Site visit	"schedule visit..."	Date, offers, attendees → outcome afterwards (resets both life curves)	Demand, Supply, Mgr
C-15	Deal	"start deal DEM-... with INV-..."	Stage, agreed terms, next action + follow-up date (required) , cancel (returns offer to Available and demand to Active)	Demand, Mgr
C-16	Exit	"client postponed...", "mark lost/invalid"	Lost (reason, competing terms), Dormant (revisit date), Invalid (reason, flag person) → Confirm	Demand, Mgr

ID	Card / panel	Appears when	Main actions	Roles
C-17	Close / retire offer	Deal closed, or "INV-... is gone"	Closed (price → market data; notify other demands) / Inactive; auto-create Upcoming renewal for 11-month leases	Supply, Demand, Mgr
C-18	Project price sheet	Upload a developer sheet, or "/project"	Create or update configurations, units and prices; flag matches over budget	Supply, Mgr
C-19	Confirm card	Any proposed bulk change (reassign, capacity, settings)	Confirm / Cancel	per action
C-20	Dashboard summary	"/dashboard", "how are we doing"	Open demand / supply / other scopes / data-quality dashboard	all
C-21	Desk item	"/desks", or a Business / Capital / Watchlist record	Business/Capital: assign, archive, open linked Property. Watchlist: follow-up task (owner, due), done	view: all; act: Mgr (desks), Supply (Watchlist)
P-01	My queue panel	Sidebar, "/queue", tiles	Sections per §4.2 / §4.3; each item → record + action card; drag to reorder is not allowed (rank is computed)	all agents
P-02	Offer panel	Row click, "open INV-..."	Tabs: Overview (status axes, life curve, ceiling), Property & other offers, Sources & sightings, Matches, Enquiries, Photos, Activity	all
P-03	Demand panel	"open DEM-..."	Tabs: Overview (status axes, life curve), Touches, Matches, Sourcing, Proposals & visits, Deal, Activity	all
P-04	Person panel	Click a person	Roles, flags, linked offers and demands, dependencies, call history	all
P-05	Project panel	"open PRJ-..."	Configurations, units, price sheets, RERA, enquiries, matches	all
P-06	Dashboards panel	Sidebar	Demand / Supply / Data quality tabs (BRD §8); every tile opens the list	all
P-07	Table panel	Open in panel	Filter on stored fields, sort, select, bulk reassign (Mgr), export	all
P-08	Desks panel	Sidebar "Desks"	Tabs: Business Desk, Capital Desk, Archive (Equipment), Network (Market Participants), Watchlist (deadlines in 14 days first)	all
Page	Settings	Gear	Users & roles, capacities, life-curve thresholds, queue and match weights, micromarkets, templates, RERA number, API keys, audit log; Vocabulary (read-only, shows the version)	Admin (capacities: Mgr)

6. User stories and acceptance criteria

6.1 Ingestion (Module A)

US-01 As a Data operator, I want to upload .xlsx/.xls/.csv files of up to ~100k rows (newspaper sheets, WhatsApp exports, lead-form and enquiry exports, broker and builder sheets), so that every source gets in.

- AC1 Up to 150k rows / 50 MB per file (A-19). Multi-sheet selection. Identical re-uploads are detected.
- AC2 Source type (Channel / Digi / Direct) and source detail are set at upload. Digi exports must map a campaign, form, project or listing ID column when one exists.
- AC2a **Intake mode (D-15)**. A header that matches the standard schema selects **strict mode**. Rows with values outside the controlled lists are rejected with an error naming the field and value. needs_review rows load and appear in the review queue. Any other header selects **mapping mode**, where legacy terms are translated and untranslatable values set needs_review.
- AC3 Processing runs in the background: Parsing → Normalising → Classifying → Deduplicating → Matching. A 100k-row file finishes in ≤ 30 min (M2).

- AC4 The report shows read = new + linked (sightings/second sources/touches) + review + unclassified + rejected. Rejected rows are downloadable.
- AC5 Raw rows are kept unchanged and every record links to its sightings.

US-02 As a Data operator, I want column mapping suggestions and saved templates, so that repeat sources need no mapping.

US-03 As a Manager, I want to see time since the last upload per source, so that enquiries don't sit in exports (R10, A-17). The data-quality dashboard shows a warning when a Digi source is > 24 h old.

6.2 Manual entry (Module A)

US-04 As a Demand agent, I want **quick add** that asks for the phone number first, so that I find an existing client or demand instead of creating a duplicate.

- AC1 Phone lookup shows matching Person(s), their open demands and flags (e.g. Invalid) before any form appears.
- AC2 Free text ("Rohan from a fintech needs 5–7k sqft office Andheri E, 8–10L, 2 months, referred by Mr Shah") prefills the form.
- AC3 The source type is Direct, capture mode is "typed in", and a referrer can be linked.

US-05 As an agent, I want **Add supply** from a demand or sourcing request, so that found supply is matched immediately.

- AC1 The form is prefilled from the demand. The property-level duplicate check runs before creation.
- AC2 The new offer starts at Contacted, is tagged "Sourced for DEM-...", is matched on creation, and is queued for verification at top priority.

US-06 As an agent, I want to update records after calls and visits (outcome, availability, price, areas, photos), so that the life curve and status stay true (C-08, C-14).

6.3 Deduplication

US-07 Supply dedup at property level (building, floor, area, locality). A phone number never decides alone. A matching post from another broker is linked as a **second source** with its price, and a **price gap** is flagged when prices differ by more than 5% (A-39). Reposts become sightings and update last seen.

US-08 Demand dedup on phone, company and requirement similarity across sources. A match becomes a **touch** on the existing demand, and the first touch keeps the credit (A-16). Uncertain cases go to review.

US-09 Uncertain merges are never silent. Every merge can be undone by a Manager, restoring records, touches, sightings and matches. (M3 ≥ 95%, M4 ≥ 85%.)

6.4 Categorisation and extraction

US-10 Each row is classified in the BRD order: record_scope → deal_type → market → segment → property_type → side (with side_evidence), plus source type. Attributes go into the named fields (locality, building, property_type, bhk_min and bhk_max, areas, price or rent, deal tags). Non-Property scopes are routed to their desk, directory or Watchlist. Low-confidence rows carry needs_review and a review_reason. Blank means unknown; placeholders like "Unknown" are never stored. (M5 ≥ 90%, measured on side + segment + deal_type.)

US-10a As a Manager, I want a Side check on the data-quality dashboard (records where side defaulted to Supply, per run), so that I can see when the extractor phrase list needs new entries (R15).

6.5 Life curve

US-11 As a team, we want every live offer and demand to show its life-curve stage and day count, with the automatic actions in BRD §4.5, so that nothing stale is published or chased.

- AC1 Thresholds per category from BRD §4.5, and Industrial per D-12. Admin-editable.
- AC2 Confirmation events reset to day 0. Sightings do not.
- AC3 Upcoming offers start 60 days before Available from. Projects follow the latest price sheet. Dormant pauses.
- AC4 Stage changes perform their actions within 5 minutes of the event and are logged in Activity.

6.6 Supply journey

US-12 As a Supply agent, I want today's call list (Must call then Should call, up to my capacity), so that I call the right people first. (§4.2, P-01.)

- AC1 Must call items show the reason (enquiry / match / SRQ) and a 24 h due time. Overdue items are red and on top.
- AC2 Should call shows rank and reason (new, demand gap, reconfirm, stale Public).
- AC3 A call outcome is mandatory to clear an item. No answer reschedules it. The 3rd no answer marks the person unreachable (A-37).

US-13 As a Supply agent, I want to add further offers on the same property (sale next to lease), so that each has its own price, life curve and matches but shares photos and verification.

US-14 As a Supply agent, I want to verify (real photos, details) and qualify (terms, revenue share) an offer, so that Public unlocks and the source is committed.

US-15 As a Supply agent, I want to set the publication level within the ceiling, with a blocking privacy scan and RERA check (§4.6, C-12). (M8 = 0.)

US-16 As a Supply agent, I want Upcoming offers with an Available from date, including the automatic Upcoming renewal offer at month 10 of every 11-month lease 11 Estates closes.

US-17 As a Supply agent, I want to create a Project from a developer price sheet with configuration offers and unit counts, update it from new sheets (prices, units), and reduce units on booking. (C-18.)

US-18 As a Supply agent, I want to retire an offer (already gone → Inactive, price to market data; unwilling → never published).

6.7 Demand journey

US-19 As a Demand agent, I want my demand queues (§4.3), so that I know whom to call and what's overdue.

US-20 As a Demand agent, I want to record the first call (requirement, budget, timing, locations, decision maker) and qualify the demand (C-09), after which the inventory check runs automatically.

US-21 As a Demand agent, I want to confirm or reject suggested matches, including bundles, with reasons. (M6 ≥ 60%.)

US-22 As a Demand agent, when nothing matches, I want to raise a sourcing request to the supply team and optionally post the demand anonymously (C-11). The post comes down when a match is confirmed.

US-23 As a Demand agent, I want to build a proposal from confirmed matches and share it as a **PDF and/or private link** (D-11).

- AC1 Includes photos, built-up and carpet area, price, availability, **building names** and the MahaRERA number. Never includes owner or broker contacts.
- AC2 Share links expire after 14 days (A-40) and record opens.
- AC3 "Mark sent" logs date and channel. The system sends nothing (BRD out of scope).

US-24 As a Demand agent, I want to schedule site visits and record outcomes. A visit resets both life curves.

US-25 As a Demand agent, I want to run a deal through In process with a required next action and follow-up date, with overdue deals at the top of my queue. (R13.)

- AC1 Stages: Negotiation → Documentation → Stamp duty & registration → Closed. Cancel returns the offer to Available, the demand to Active, and keeps the failed deal.

US-26 As a Demand agent, I want to exit a demand as Lost (reason, competing terms → market data), Dormant (revisit date, default 60 days, A-41) or Invalid (reason; flag the person). Matches are released and the offers' owners notified.

US-27 As a Demand agent, I want to close a deal. The offer closes, its other matched demands are notified and return to matching, and the closing price is kept as market data.

6.8 Matching

US-28 Matching per §4.5: many-to-many, bundles, date-aware exclusions with reasons, reconfirm flags on Stale offers, price-change flags, and close propagation. Each match shows score and factor breakdown.

US-29 New confirmed or suggested matches notify the demand owner in-app and put the offer into Must call when it is not yet Contacted (A-42).

6.9 Dashboards

US-30 Demand, Supply, **Other scopes** and Data-quality dashboards with the tiles in BRD v0.6 §8:

- classification grids (segment × deal_type, with Sale split by market) shown with For / Wants labels;
- deal-tag filters (e.g. Auction, Tenanted);
- desks, Archive, Network and Watchlist counts;
- side checks and rejected-value counts.

Every tile opens the underlying list. Filters: period, segment, deal_type, market, property_type, micromarket, owner. Loads in ≤ 2 s p95.

6.10 Chat

US-31 As any user, I want to ask in plain English or Hinglish and get grounded answers, tables and Excel downloads.

- AC1 Covers records, queues, life curve, matches, deals and market data ("average closed rent for offices in Marol this quarter").
- AC2 It can propose any action in §5.4, but applies only on click (R-CHAT-1).
- AC3 Correctness $\geq 85\%$ on the benchmark (Appendix A, M7).

6.11 Export

US-32 Background Excel export ($\leq 100k$ rows) from any list or chat answer, with a 24 h link, audit-logged.

6.12 Listings API

US-33 As the 11 Estates website and project microsites, I want offers, projects and anonymous demand posts at their publication level, so that I can display them.

- AC1 Anonymous: generated label, locality, area, price, availability, "details subject to confirmation", with no photos. Public: plus photos and the other public fields (§8.3). All four segments are served.
- AC2 Every item carries the 11 Estates MahaRERA number. Project items carry the project RERA number.
- AC3 Filters, cursor pagination (max 50), a change feed (published / downgraded / withdrawn since t), API key per site, rate limit.
- AC4 Items are withdrawn or downgraded within 1 minute of a close, retire, Stale or Expired event.

6.13 Administration and audit

US-34 Admin manages users, roles, capacities (Managers too), life-curve thresholds, queue and match weights, micromarkets, templates, the RERA number and API keys. **US-36** As any user, I want the Business Desk, Capital Desk, Archive, Network and Watchlist as list views, so that non-property records are kept and findable (BRD scope 9).

- AC1 Managers can assign, archive or open the linked Property of Business and Capital items.
- AC2 Watchlist items create a follow-up task for the supply team. Deadlines within 14 days show first.
- AC3 These records never enter matching, queues or the Listings API.

US-37 As an Admin, I want to see the controlled vocabulary and its version (read-only), so that everyone uses the same values as the extractors (D-16).

US-35 Immutable audit log of contact views, exports, merges and undos, publication changes, exits, deal closes and setting changes, kept ≥ 1 year.

7. Functional requirements

ID	Area	Requirement	Stories
FR-ING-1	Ingestion	Upload, mapping, templates, background processing, report, lineage	US-01, US-02
FR-ING-2	Ingestion	Source freshness monitoring	US-03
FR-ING-3	Ingestion	Strict and mapping intake modes; row-level validation against the controlled lists; legacy-term translation	US-01
FR-ENT-1	Entry	Quick add with phone-first lookup and text prefill	US-04
FR-ENT-2	Entry	Add supply from demand or SRQ, matched on creation	US-05
FR-ENT-3	Entry	Call and visit outcome capture	US-06, US-12
FR-DUP-1	Dedup	Property-level supply dedup, second sources, price gaps, sightings	US-07
FR-DUP-2	Dedup	Demand dedup to touches with first-touch credit	US-08
FR-DUP-3	Dedup	Review queue, reversible merges	US-09
FR-CLS-1	Categorisation	Classification in BRD order with side_evidence, needs_review and review_reason; scope routing	US-10
FR-CLS-2	Categorisation	Generated display labels from stored fields	US-10, US-33
FR-VOC-1	Vocabulary	Versioned, read-only controlled vocabulary shared with the extractors	US-37
FR-DSK-1	Desks	Business, Capital, Archive, Network and Watchlist list views, tasks, linked Property	US-36
FR-LIF-1	Life curve	Engine, thresholds, automatic actions	US-11
FR-SUP-1	Supply	Must/Should call queues, capacity, ranking, outcomes, attempts	US-12
FR-SUP-2	Supply	Multiple offers per property, verify, qualify, retire	US-13, US-14, US-18
FR-SUP-3	Supply	Upcoming offers and lease-renewal auto-creation	US-16
FR-SUP-4	Supply	Projects, price sheets, configurations, units	US-17
FR-PUB-1	Publication	Ceiling computation, level choice, auto-downgrade, privacy scan, RERA	US-15
FR-DEM-1	Demand	Demand queues, first call, qualify, inventory check	US-19, US-20

ID	Area	Requirement	Stories
FR-DEM-2	Demand	Sourcing requests and anonymous demand posts	US-22
FR-DEM-3	Demand	Proposals (PDF, share link), site visits	US-23, US-24
FR-DEM-4	Demand	Deals with mandatory follow-ups; close; cancel	US-25, US-27
FR-DEM-5	Demand	Exits Lost / Dormant / Invalid with side effects	US-26
FR-MAT-1	Matching	Many-to-many, bundles, date-aware, flags, propagation, scores	US-28
FR-MAT-2	Matching	Match notifications and Must call trigger	US-29
FR-DSH-1	Dashboards	Demand, Supply, Other scopes and Data-quality dashboards (classification grids, side checks) with drill-down	US-30, US-10a
FR-CHT-1	Chat	Grounded Q&A, tables, Excel, "How I got this"	US-31
FR-CHT-2	Chat	Chat-first UI, cards, panels, My queue, confirm-before-change	US-31, all
FR-EXP-1	Export	Background audited exports	US-32
FR-API-1	Listings API	Offers, projects, anonymous demand posts at publication level; change feed	US-33
FR-VIS-1	Access	Tenant isolation, roles, audit of contact views	§2
FR-ADM-1	Admin	Users, capacities, thresholds, weights, micromarkets, RERA, keys	US-34
FR-AUD-1	Audit	Immutable audit log	US-35
FR-NTF-1	Notifications	In-app: uploads done, matches, SRQs, handoffs, closes/exits, overdue follow-ups	US-29, §4.4

8. Non-functional requirements

8.1 Defaults from CLAUDE.md (kept)

ID	Requirement
NFR-1	Throughput: 1,000 requests/second sustained across synchronous APIs (A-30)
NFR-2	Latency: p95 < 300 ms for synchronous APIs (lists, records, queues, Listings API)
NFR-3	Availability: 99.9% monthly
NFR-4	Backups with PITR; encryption at rest and in transit

8.2 Product-specific

ID	Area	Requirement
NFR-5	Bulk	100k-row file processed in ≤ 30 min, 10 files/day (~1M rows/day)
NFR-6	Async	Uploads, extraction, dedup, matching, life-curve runs, exports, PDFs and photo fetch run off the request path
NFR-7	Chat	First token ≤ 3 s; full answer ≤ 15 s (p95)
NFR-8	Queues and dashboards	My queue ≤ 1 s, dashboards ≤ 2 s (p95) at 5M records
NFR-9	Life curve	Event-driven actions ≤ 5 min; nightly run finishes by 04:00 IST
NFR-10	Freshness to API	Publication changes reach the Listings API ≤ 1 min
NFR-11	Volume	Year 1: ~5M offers and demands, ~20M sightings, ~1M people (A-31)
NFR-12	Residency	All data, backups and AI inference on personal data in India
NFR-13	Privacy	PII marked, never logged, never in API responses; contact views audit-logged
NFR-14	AI privacy	No personal data to third-party AI providers (D-8)
NFR-15	Tenant isolation	Every read and write scoped by organisation, proven by automated tests
NFR-16	Security	Google sign-in (2-step verification required on accounts); 12 h idle session expiry; OWASP ASVS L2
NFR-17	Recovery	RPO ≤ 5 min, RTO ≤ 1 h
NFR-18	Retention	Personal data purged 24 months after last activity on all linked records (A-34). Market data points kept without personal data
NFR-19	Browsers / a11y	Latest 2 versions of Chrome, Edge, Safari, Firefox; WCAG 2.1 AA on core flows

8.4 Phase 1a pilot on free plans (CR-005)

Until the **paid-plan gate** is passed, these relaxations apply. The gate: Vercel Pro (bom1), Supabase Pro + PITR (Mumbai), a dedicated Hugging Face endpoint. After the gate, all approved NFRs apply again with no further CR.

NFR	Approved	Pilot value
NFR-1 Throughput	1,000 rps	Best effort (free-plan limits)
NFR-3 Availability	99.9%	Best effort; no SLA
NFR-4 Backups	PITR	Nightly <code>pg_dump</code> per schema; up to 24 h data loss acceptable
NFR-5 Bulk	100k rows ≤ 30 min, 10 files/day	≤ 20 k rows per file, ≤ 3 files/day (DB ≤ 500 MB)
NFR-11 Volume	5M records	$\leq \sim 200$ k records in total
NFR-17 RPO/RTO	5 min / 1 h	24 h / 1 day
Data	Real 11 Estates data	Sample or anonymised data only ; no real client or owner contacts

NFR	Approved	Pilot value
Use	Production	Internal testing and demo only (Vercel Hobby is non-commercial)

8.3 Listings API fields

- **Anonymous offer:** public ID, **generated label**, deal_type, market, segment, property_type, bhk_min/max, city, micromarket, locality, area (built up and/or carpet), price or rent, possession_date, deal tags (sale_mode, tenancy_status, furnishing), "subject to confirmation" note, 11 Estates MahaRERA number.
- **Public offer:** everything in Anonymous plus photos, floor band (low / mid / high, A-43), parking, amenities, possession_status, sanitised description.
- **Project (Sale, Primary):** name, developer name, locality, configurations (property_type, bhk, price from, units available band), possession, amenities, floor plans, photos, project RERA number, 11 Estates MahaRERA number.
- **Anonymous demand post:** "Wants" label, deal_type, segment, property_type, micromarkets, area range, budget band, timing.
- **Never:** building/society name, wing, unit, exact floor, street address, contacts, sources, internal notes, owners, side_evidence, needs_review data. Non-property scopes are never served.

9. External systems

System	Direction	Purpose	Notes
11 Estates website and project microsites	They call us	Listings API	API key per site; change feed
Image hosts (links in sheets)	We fetch	Photos	Public URLs only; failures listed, never block
AI model hosting	We call	Extraction, classification, chat, bundle suggestions	NFR-12/14; self-hosted open-weight likely; Stage 3
Google Identity	Sign in	Staff login	Invited accounts only
Email (transactional)	To staff only	Invites, digests	No outbound to clients or owners
Newspaper extractor and WhatsApp extractor (11 Estates, owned by Vinit)	Produce upload files	Standard-schema files (BRD §4.2) uploaded by staff	Strict intake mode (D-15); shared vocabulary (D-16)
Next phase (not Phase 1)	—	WhatsApp (n8n), Meta lead ads, website form connectors	D-13, BRD OQ-7

10. Assumptions

Numbering continues. Assumptions A-20 and A-28 from v0.3 are dropped (CR-002 X-8). A-35 is dropped: Land is a segment (CR-003 Y-1).

- **A-14** Data operators work the review queues for all uploads.
- **A-15** One role per user. A Data operator permission can be added to an agent.

- **A-16** First touch gets attribution credit (BRD A-16). Shared-commission terms with an introducing broker are recorded as a note and % on the demand. There is no commission calculation (BRD out of scope). Closes BRD OQ-21 unless you object.
- **A-19** Max file 150k rows / 50 MB.
- **A-25** Max export 100k rows; link valid 24 h.
- **A-26** Photos: JPG/PNG/WebP ≤ 10 MB, ≤ 30 per property.
- **A-30** 1,000 rps target kept (CLAUDE.md default); may be lowered to cut cost.
- **A-31** Year-1 volumes as NFR-11.
- **A-32** RPO ≤ 5 min, RTO ≤ 1 h.
- **A-34** Personal data retention 24 months after last activity.
- **A-36** Default daily capacity 40 calls per person, editable by Managers.
- **A-37** 3 unanswered attempts marks a person unreachable (BRD OQ-23 proposal).
- **A-38** Bundles: up to 3 offers, same building or adjacent micromarket, commercial and industrial only.
- **A-39** Price-gap flag when two sources differ by $> 5\%$.
- **A-40** Proposal share links expire after 14 days.
- **A-41** Default Dormant revisit: 60 days (BRD OQ-24).
- **A-42** A new match on a not-yet-Contacted offer puts it in Must call (BRD §5 "Signal").
- **A-43** Public listings show a floor band, not the exact floor, to avoid identifying the unit.

11. Open questions

#	Question	Blocking?
OQ-4 (BRD)	Sample files for dedup rules: one newspaper ad repeated over 3+ days, and one client in two sources	No (needed before Stage 4)
OQ-7 (BRD)	Which connector first next phase? Does Vinit already run an n8n WhatsApp flow that could produce upload files now?	No
OQ-11 (BRD)	Budget, launch date, team size	Stage 3
OQ-13 (BRD)	Review the chat benchmark in Appendix A	No
OQ-P9	Confirm A-36 (40 calls/day), A-41 (60-day Dormant revisit), A-40 (14-day proposal links)	No
OQ-P11	Vinit's extractor output columns (or a sample file from each extractor), so that Appendix C matches them one to one (BRD §4.2)	Yes, for Stage 2 approval of Appendix C
OQ-P10	Should the supply team see a client's name on a matched demand, or only the demand summary? (D-1 says all staff see all; confirm this includes client identity)	No

12. Traceability to BRD v0.6

BRD	Covered by
G1 One clean database	US-01...10, FR-ING, FR-ENT, FR-DUP, FR-CLS
G2 Automatic understanding	US-10

BRD	Covered by
G3 Matching	US-28, US-29, §4.5
G4 Guided journeys	§4.1–4.4, US-11...27, P-01
G5 Self-serve insight	US-30...32
G6 Distribution	US-15, US-33, §4.6, §8.3
G7 SaaS ready	R-VIS-1, NFR-15
M1–M9	US-01 (M1, M2), US-07/08 (M3, M4), US-10 (M5), US-21 (M6), US-31 (M7), US-15/33 (M8, M9)
R10–R14	US-03, US-12/D-10, US-08, US-25, US-15/33

Appendix A: Chat benchmark (draft, please edit)

1. How many active 2BHK lease offers are there in Andheri West?
2. Show resale 3BHK offers in Powai under ₹3 Cr that are Fresh.
3. Which micromarkets have more open demand than matching supply for commercial lease (deal_type Lease, segment Commercial)?
4. What was the average closed rent for offices in Marol this quarter?
5. List my follow-ups overdue today.
6. Which Public offers turned Stale this week?
7. Show demands in Sourcing for more than 7 days.
8. Which source type gave us the most qualified demand last month?
9. Give me all industrial galas for lease in Bhiwandi as an Excel file.
10. How many offers did each supply agent verify this week?
11. Show bundles suggested for office demand above 5,000 sq ft.
12. Which Upcoming offers become available in the next 60 days?
13. Can you help me match the requirements for an industrial area of 4,000 sq ft? *(from product owner)*

Appendix B: Acceptance scenarios (from Vinit's journeys artifact)

Each scenario must run end to end in the product, with the stated status axes, queue entries and dashboard effects. See `docs/inputs/vinit-journeys-artifact.md` for the step-by-step detail.

ID	Scenario	Key checks
AS-D1	DEM-000127 captured via Channel (Anil's WhatsApp post) → second touch via Meta lead ad → qualified → 3 matches incl. a Marol bundle → proposal → site visit → In process (DEAL-0019) → Closed ; Anil's share noted	First touch credit stays with Channel; bundle is one match; other matched demands on the closed offer notified
AS-D2	Same, via Digi first, no inventory → SRQ + anonymous demand post → Add supply ×3 (INV-00611 found leased → match dropped) → proposal → Lost (Powai, 2 months rent free)	Sourced-for tags; demand post withdrawn on match; competing terms saved as market data; matches released

ID	Scenario	Key checks
AS-D3	Via Direct (Mr Shah referral, quick add) → qualified → matched → proposal → client silent → Ageing at day 31 → reconfirm → Dormant until 1 Mar	Phone-first quick add; referrer credit; life curve pause; revisit returns to queue
AS-D4	Invalid variants: broker posing as client (flag: anonymous shares only); unreachable after 3 attempts; client is actually a broker (moved to People as Broker)	Person flags affect future records
AS-S1	Interest first : Sanjay's post → Should call rank 38 → Anonymous → Rakesh duplicate → second source + price gap → enquiry → Must call → confirmed ₹8.5 L + sale offer ₹11 Cr → verified → Public → 3 matches → leased → other demands notified → sale offer "tenant in place"	Two offers on one property; auto-close propagation
AS-S2	Proactive vetting : newspaper 2BHK Andheri W → Should call rank 4 (demand gap 12) → confirmed → photos → Public → 2 matches	Photos shared = permission; demand-gap ranking
AS-S3	Sourced for a demand : SRQ-014 → Add supply → Contacted, matched on creation, Private by choice → verified → qualified → visit → In process → closed	Top-priority verification; Private allowed while Public ceiling
AS-S4	Ageing record : Public offer → day 31 Should call → day 61 Stale → Anonymous → day 91 Expired → unpublished, "Availability unknown" → call: leased at ₹5 L → Inactive + market data	Auto-downgrade and withdrawal via API ≤ 1 min
AS-S5	Future availability : Upcoming INV-00701 (from 1 Feb) → Anonymous with date → fintech excluded "Available too late", logistics firm matched → clock starts 2 Dec → verified → Public → visit 1 Feb	Date-aware exclusion; life curve start rule; lease-renewal Upcoming
AS-S6	New project : PRJ-0031 with 2 BHK (38 units) and 3 BHK (22) → Public → 11 enquiries, 4 matches (one also matched to resale) → new sheet: price up, units down → "price above budget" flag → Ageing → request sheet → booking reduces units	Project RERA on listings; unit counts; price-change flags

Appendix C: Field dictionary (draft, to be matched to the extractor columns, OQ-P11)

Names and values follow BRD v0.6 §4.2. Columns marked † are inferred from the BRD and must be confirmed against Vinit's extractor files.

Field	Type	Values / notes	Applies to
record_scope	enum	Property, Business, Capital, Equipment, Market Participant, Market Signal	all
side	enum	Supply, Demand, None (Participant/Signal only)	all
side_evidence	text	Deciding phrase from the ad	extracted rows
needs_review	bool	TRUE / FALSE	all
review_reason	text	† controlled reasons TBD with Vinit	all
deal_type	enum, pipe-list	Property: Sale, Lease, JV, Pagdi. Business: Sale, Lease, Partnership, Distribution. Capital: Equity, Debt, Project Funding, Asset Sale. Equipment: Sale, Lease	all but Participant/Signal
market	enum	Primary, Secondary, Any (Any on demand only)	Sale

Field	Type	Values / notes	Applies to
segment	enum	Residential, Commercial, Industrial, Land	Property
property_type	enum, pipe-list	Per segment, BRD \$4.2	Property
property_detail	text	Descriptive words (Luxury, Duplex...)	Property
land_use	enum	Residential, Commercial, Industrial, Agricultural, NA, Mixed	Land
bhk_min, bhk_max	number	0.5 = 1 RK (D-17)	Residential
built_up_area_sqft_min / _max †	number	Supply uses min = max	Property
carpet_area_sqft_min / _max †	number		Property
sale_price_inr_min, sale_price_inr_max	number		Sale
rent_monthly_inr_min, rent_monthly_inr_max	number		Lease
current_rent_inr	number	Tenant's rent on a preleased sale	Sale + Tenanted
deposit_inr	number		Lease
budget_inr_min, budget_inr_max †	number	Demand; the price field depends on deal_type	Demand
sale_mode	enum	Private, Auction	Sale
deadline_date	date	Auction / tender / offer / EOI last date	any
tenancy_status	enum	Vacant, Tenanted	Property
tenure	enum	Freehold, Leasehold	Property
agreement_form	enum	Leave and License, Registered Lease	Lease
is_jodi	bool		Residential
possession_status	enum	Ready, Under Construction, Under Redevelopment, Available From	Property
possession_date	date/ month	Available from date	Property
furnishing	enum	Furnished, Semi Furnished, Unfurnished, Bare Shell	Property
price_negotiable	bool		Property
locality, city, state, landmark	text	Locality normalised to the micromarket hierarchy	Property
building_name †	text	Private; proposals only	Property
contact_name †, contact_phone †	text	PII; phone normalised	all
party_type	enum	Owner, Broker, Developer, Company, Bank, Society, Government	Person
participant_role	enum	Broker, Developer, Auctioneer, Architect, PMC, Consultant, Lender	Market Participant

Field	Type	Values / notes	Applies to
